

## RESCUE RANGER

Delivering Hope, One Ride at a Time

### Rescue Ranger Ambulance

The **Rescue Ranger Ambulance** has been developed to provide Transport to and from local health centres and hospitals, providing communities with the means to take advantage of distant and widespread health-care resources.

Able to safely and comfortably carry one patient and an outreach medical worker, plus emergency supplies for onsite treatment the **Rescue Ranger Ambulance** can greatly reduce the time taken to get essential and urgent medical assistance to remote communities.

Every **Rescue Ranger Ambulance** has a specialist leading link Front suspension system fitted as standard, improving the vehicle's already impressive off-road and on-road capability. In addition, complete patient protection has been improved with additional "roof" bars and an all-weather cover. Finally, patient transfer has been improved with a novel hinged section allowing easy access to the stretcher's flat platform. The main feature of the **Rescue Ranger Ambulance** is the side-mounted stretcher, attached via connecting bracket that, when combined with the sidecar's suspension, considerably smooths the ride over rough ground.

The stretcher itself has multiple functions. When flat, a patient can be carried, protected by an all weather cover. It can then convert into a seated position. In both positions their watertight pull-out draw to store medical and other equipment.

The chair position is suitable for the walking wounded, sick and expectant mothers.

Standard equipment has also been improved with the addition of a large capacity motorcycle rear carrier box and a fire extinguisher holder. In addition to these modifications to the **Rescue Ranger Ambulance** the sidecar, it has a 200cc has been improved with electric start and an easy to maintain pushrod engine that delivers an improvement in engine torque over the older overhead cam engine.

All these developments underline our commitment to produce the most complete, effective and versatile vehicle solution for rural healthcare delivery throughout the world.

## Advantages

- This rugged vehicle is designed for outreach in rural, remote areas
- That ambulance is able to carry a passenger and a pillion
- Designed for offroad able to go the areas where 4-wheel drive vehicles are required at a fraction of the cost
- It can be adapted to the patient reequipments for lying or sitting position and covers for wind and rain protection
- The unit is highly fuel-efficient
- The unit can be branded to the customers reequipment
